Assignment: Lead Management Automation

Objective: Build an automated lead management system using Lovable, n8n, Google Sheets, and Gmail.

Requirements

1. **Website:** Use Lovable to create a business website with a lead submission form containing Name, Email, Company Name, Interested Service, and Message.
2. **Webhook:** Connect the form to an n8n Webhook to receive submitted lead information.
3. **Store Leads:** Save every lead in Google Sheets with the submission date and initial email status as Pending.
4. **Send Email:** Automatically send a personalized email introducing the business and its services to each lead.
5. **Update Status:** After sending the email, update the corresponding Google Sheets row to Sent and record the sending time. If sending fails, update the status to Failed.

Submission: Website URL, n8n workflow JSON, and screenshots showing the lead data and email status in Google Sheets.
